Do the right thing and pass the law to remove and label products with GLYPHOSATE. Our health system is burden with people with cancer do to these toxic exposures to these herbicides that are allow to be sprayed on our foods. It's not "Global Warming" but instead an assault on humanity through these chemicals which of all things, are big contributors to our toxic air quality and toxicity to the planet.

Start here.

I also agree with the following statement but would rather it be eliminated completely.

I/We request that the Prop 65 NSRL (No Significant Risk Level) for glyphosate must be a validly arrived at NSRL, per CA regulations, substantially lower than the proposed 1100 micrograms per day, in order for this Safe Harbor to actually be safe to Californians. Until a comprehensive independent study is done, showing real life exposure levels, regulatory authorities should use a NSRL of well below 0.0001 micrograms/day, (Thongprakaisang et al., 2013), the level where breast cancer has been detected, in keeping with The Precautionary Principle.

With great concern,
Sylvia
